

# PROVIDING DIMENSIONS - WALLS AND SECTIONS

Measure height of wall from top of chair rail to the bottom of crown molding. Measure wall width from pier to pier.

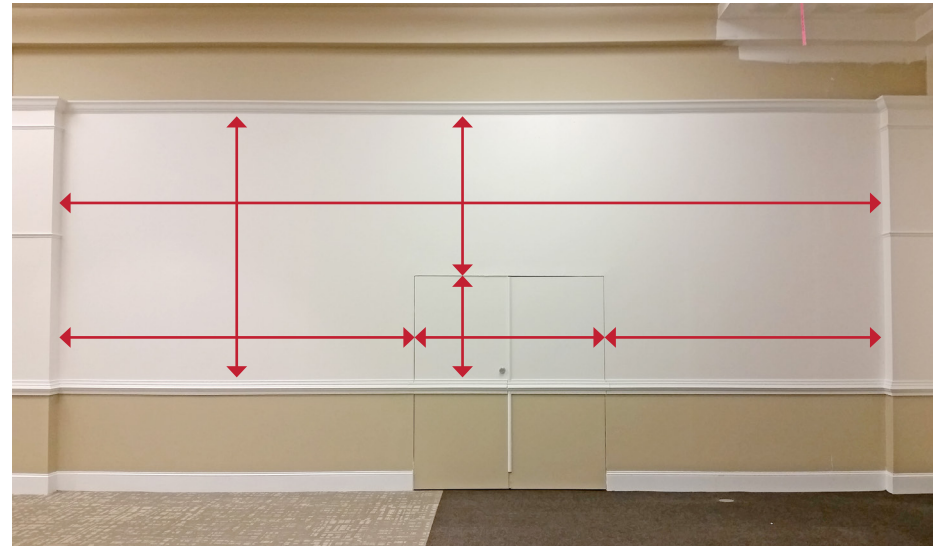

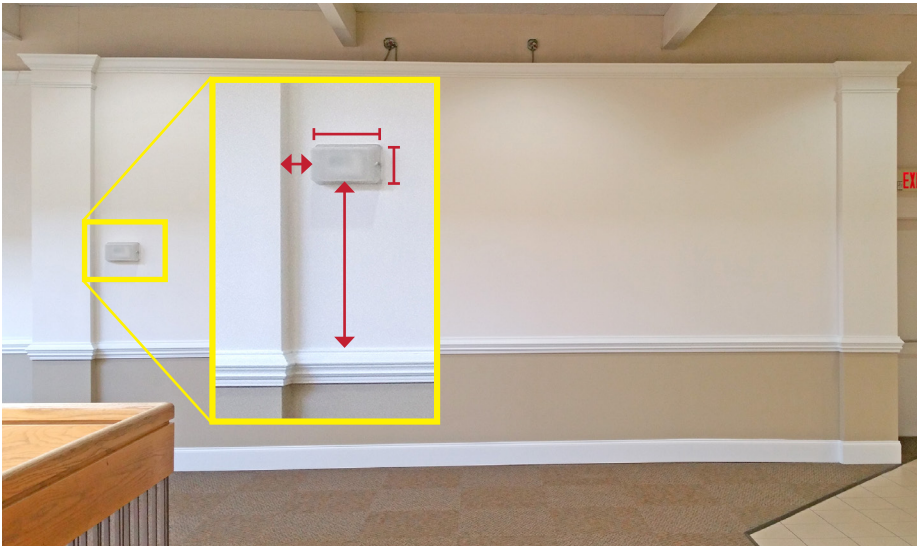

It is best to provide dimensions in feet and inches. Do not round fractions of an inch. The more accurate the better!

If the wall has multiple sections, measure each section separately.

# PROVIDING DIMENSIONS - SPECIAL SITUATIONS

If the wall has any mounted items (i.e. motion sensor, fire alarm, thermostat, etc.) or doors, provide necessary measurements so we can account for and design around them.

# PROVIDING DIMENSIONS - GLASS WALLS

Provide dimensions for total width and height. Measure the total width and height from ***inside the outer frame***. Provide dimensions for each pane/panel of glass and the dividing trim sections. ***Be sure that the sum of all individual panes of glass and trim add up to the total width and height.***
